  - 1. Stormwater Management Update
  - 2. Update on Activities for Greenville's 250th Anniversary
- V. Adjournment**

# City of Greenville, North Carolina

Meeting Date: 02/05/2024

---

**Title of Item:** Stormwater Management Update

**Explanation:** This presentation will give updates of the Stormwater Management Program. This includes a review of the 2016 Watershed Master Plans and future updates, a review of the Utility Rate Study and current Stormwater Capital Spending Plan, and a review of proposed changes to the Stormwater Management Ordinance to comply with current state regulations.

In August 2016, the City completed Stormwater Master Planning for the seven basins located within the City of Greenville. These products are used to assist with maintenance activities, assess capital improvement project needs, meet state and federal stormwater requirements, and aid in quality assurance of new/re-development efforts in the City of Greenville. This presentation will review these Watershed Master Plans, give update on current status of projects proposed by the plans, and discuss upcoming 10 year updates to the plans.

After completion of the plans, staff assembled a stakeholders group, the Stormwater Advisory Committee (SWAC), to complete a utility rate study linking maintenance, capital improvement needs, financing and policy. The SWAC met 14 times over two years and made recommendations to Council for a Stormwater Utility rate increase and increased levels of service. These recommendations led to the current stormwater utility rate plan of an annual \$1 per ERU/Month increase for 4 consecutive years increasing the Stormwater Utility Rate to \$9.35/ERU/month in 2025. This presentation is a review of this study and update of the current rate and spending plan.

In addition, in April 2020, the North Carolina Environmental Management Commission adopted updates to the Tar-Pam and Neuse Nutrient Strategy rules. These updates were part of a legislative mandated rules review procedure. These changes require the City to amend its stormwater management ordinance and programs. This presentation highlights the major required and optional changes as recommended by the Stormwater Regulatory Committee which have been reviewed and approved by NC Department of Environmental Quality (NCDEQ). It is required that the revised local ordinance be adopted and effective by July 1, 2024.

**Fiscal Note:** No fiscal impacts related to this agenda item.

**Recommendation:** Informational presentation.
